Aftercare

**SAFETY**

**KinkEdNV does NOT  
teach anyone how to be  
safe**

We teach you how to play  
*safer.*

# RISKS

BURNS 

At 118 degrees, human skin  
can sustain  
first-degree burns

Second-degree burn injury  
can occur at a temperature of  
131 degrees.

Human skin is **destroyed**  
when temperatures reach  
162 degrees

**The degree of a burn is determine by the  
depth and severity**

# First degree burns have these signs

Redness

Hot to the touch

Irritation

Dry

No blisters or bubbles

**First degree burn: Sunburn is a common example**

# Second degree burns have these signs

Swelling

Severe pain

Blisters

Sloughing (top layer of skin falls away)

Weeping fluid

**A swollen burn can put pressure on nerve cells and restrict blood flow in parts of the body that aren't even involved in the burned area.**

**When burns go all the way around an arm or a leg, it can result in what's known as compartment syndrome.**

**In the worst-case scenario,  
compartment syndrome  
can lead to dying tissue.**

**The dying tissue gives off toxins that poison the areas around it, increasing the overall damage.**

The process can go on long  
enough to **kill** the victim.

**One indicator to call a burn severe is if it reaches all the way around an arm or a leg.**

Another is if the burn  
involves the hands or feet.  
That swelling could lead to  
an **amputation.**

Second degree burn:

**Third-degree burns extend all the way through the dermis and into the subcutaneous tissue beneath. Look for:**

Black center area

Dry burn

Surrounded by second-degree burned skin

Third-degree burns always  
require  
**skin grafts**  
to heal.

**I am no hero.  
I did not have the stomach  
to share 3rd degree burn  
photos.**

**You're welcome.**

Google is your friend...

# Wax play safety tools and precautions

1 of 8

Multipack Quantity: 1

1  
\$17.44

2  
\$34.86

~~4  
\$69.67~~

~~6  
\$104.44~~

# First aid kit

1 of 12

**\$13.44** \$13.44 each

# Tarp

1 of 9

**\$2.92** \$2.92 each

**Water**

*A neat and clutter free play area*

**Tools for wax removal but we will get to that later...**

# Burn Treatment and What You Should Know

## Burn Treatment and What You Should Know

Run cool tap water over the burn or applying cool compresses for the first 30 minutes. Do **NOT** apply ice, as this can slow the healing process.

## Burn Treatment and What You Should Know

Cover the burn with a non-stick bandage. You can apply antibiotic ointment or aloe vera gel to keep the burn moist for the first couple of days, but don't keep the wound wet longer than that.

## Burn Treatment and What You Should Know

Over-the-counter pain  
medicine can alleviate the  
discomfort

Infants and the elderly are more susceptible to burns and the healing process is more strenuous on these two groups in particular.

It is highly recommended that  
you see a **medical professional**  
to assess and treat your burn.

**Now we can talk about wax...**

What is the “safest” wax to use?

**Paraffin**

**It is advisable to avoid**

scented

dyed

metallic

These have an increased melting  
point.

Burn hotter

Cause scarring

We recommend  
additive free

# Melting points

**High** burning: Beeswax

145° F to 170° F

Do **NOT** use

Beeswax Pillar Candle - 3" x 4"

★★★★★ [1 rating](#)

1 of 1

**\$16.95**

Hyoola, 6 Inch x 3/8 Handmade All Natural Beeswax Taper Candles - Yellow Unscented (25 Pack)

★★★★★ [Write a review](#)

1 of 5

**\$16.99** ~~\$26.68~~

# Tips for Tops

Test wax on yourself first

# Tips for Tops

Test on bottom next

\*Remember everyone's pain threshold is different

**Break Time**

# How to Prepare

Shaving may be ideal.

Apply baby or coconut oil to  
the skin before anything else.

# Positioning

The further the heat source is to  
the skin, the better

**Avoid** the face and eyes.

Face skin is very thin.

**Avoid** open wounds

**Avoid** genitalia

slaves  
in love

This is a **safer** practice... It  
has been done

## Best Developed Practice

- 18" is the target distance to begin your pours
- Start with high and smaller pours to gauge
- Communicate
- Gradually decrease distance of pours

# Do NOT Pool wax

It takes longer to cool and leaves heat on skin longer

- When using a candle, rotate it so it burns evenly
- Wax play is for external use only

If wax gets too intense, wipe it with your hands.

1. This spreads and cools the wax
2. Holding hand over wax gives added/different sensation

**Added Fun**

A crayon will burn for 30 minutes

# Removal
